What Are The Most Popular Cryptocurrencies?

Anybody who uses the internet will have at least heard something about **cryptocurrency** in the last few years. However, the world of **digital coins** has advanced quite a lot from its small beginnings. From the value of popular currencies, to the sheer number of options out there, those hoping to get into trading or investment might find it all to be a little overwhelming.

The good news is that we're here to help. Here are some of the most popular cryptocurrencies right now.

Bitcoin

It should come as no surprise that **Bitcoin** is at the top of the list. While it was cheap to buy at first, this is now the most expensive crypto on the market; with a price tag reaching over 30 thousand pounds. While not always a feasible investment for those who are just starting out, it's certainly one of the leading names – and this is not likely to change any time soon.

Ethereum

While not quite as valuable as **Bitcoin**, Ethereum is the second most popular coin, with a price that reaches just over 2 thousand pounds. While that seems small in comparison, this makes it a perfect investment opportunity for those who want a more affordable option.

Litecoin

Another one of the **digital coins** that you should consider looking into if you're hoping to make an investment without the higher costs is Litecoin. While still gaining notoriety, its price of nearly £130 makes it a far more feasible option for those looking to start small.
